Refund Checks Undeliverable

About 10,000 southern Texas taxpayers have received or will receive refund checks — and in some cases both — waiting for them at the Internal Revenue Service. The checks were returned to IRS undelivered.

The most common reason for undelivered checks, according to Robert M. McKeever, district director for the IRS in southern Texas, is that the taxpayer has moved and left no forwarding address with the U.S. Postal Service.

Refund checks for southern Texas taxpayers averaged \$303 this year with tax rebates averaging \$123. Last year the refunds averaged \$303.

CHEERLEADERS — Deepwater Junior High cheerleaders recently attended the National Cheerleaders Association clinic held at the University of Houston. Cheerleaders participating were, left to right, top, Tyl Brooke Melancon, center, Becky Patterson, Mary Farnum, Terri Selzer and front, Lebe Bailey.

Area In Bicentennial Trail

Markers designating a Bicentennial Trail — a 136-mile loop of highways and farm-to-market roads surrounding Houston — will be installed by the State Department of Highways and Public Transportation shortly after Sept. 1, Houston American Revolution Bicentennial Commission (HARBIC) Chairman Joe H. Foy announced.

The Bicentennial Trail offers citizens and visitors an interesting introduction to the history, agriculture, industry and geography of the area.

"You can see a lot of Texas in a short time," according to Foy. Without hesitating, he mentions just a few of the sites: "The first sugar refinery in Texas, the only draw bridge in the area, the location where Texas won the battle for independence, orange groves, fig orchards, rice fields, fishing fleets and Moonshine Hill, which is placed with oil rigs of a bygone era."

Outlining the route, he said it extends from FM 1960 on the north, State Highway 6 on the west and south, connecting with FM 538 between Alvin and Seabrook, State Highway 146 on the east, connecting with the La Porte Rd., Battleground Rd. (134) and Crosby Lynchburg Rd. to FM 1960 at Humble.

The Trail is convenient for mini-trips. "You can take several days and see all of the points of interest or you can take several hours and see just a few of them," Foy says.

A project of HARBIC, the Trail became a reality on June 19. At that time, Governor Dolph Briscoe signed a bill into law establishing the Trail. The bill was sponsored in the Texas Legislature by Houston lawmakers State Senator Lindor Williams and State Representative John Whitmire.

Foy points out that the Bicentennial Trail offers people a visible reminder of the Bicentennial and a chance to participate by getting to know this part of the country a little better. He adds that the law authorizes the highway department to place markers along the Trail. About 40 signs will be put up, according to highway department sources.

For Foy, HARBIC Vice Chairman, Marcelle Perry, and the HARBIC Harbors Task Force members led by Dr. A. Roy Price, chairman, and Calvin T. Bishop, vice chairman, the creation of the Trail means that their persistence and effort has paid off.

Foy comments on the future of the Trail: "As soon as the markers are in place and word gets out, more and more people will follow the Trail."

Lafield Speaks On Energy

Bill Lafield was guest speaker for the Deer Park Kiwanis Club Aug. 28. Lafield is in charge of public relations for Shell and spoke about Shell's view of Government Regulations and Energy.

He is a native Louisianian who earned a B.A. degree in

journalism from LSU in 1967. After two years as an information officer in the U.S. Army, for a year and one-half and was later named a Public Relations Representative. Last November, he was re-assigned to the Deer Park complex.

Office Public Relations Organization where he served as editor of a company publication. For a year and one-half and was later named a Public Relations Representative. Last November, he was re-assigned to the Deer Park complex.

Press Women Meet Sept. 13

A mini-workshop and meeting of District 8 Texas Press Women, Inc. (TPW) is scheduled from 10:30 a.m. to 3 p.m. Sept. 13 at the University of Houston Continuing Education Center.

On the agenda of a brief business meeting which will begin the day's activities in the Segitarius Room will be selection of a district nominee for the TPW Woman of Achievement.

The first of two workshop programs will begin at 11:30 a.m. featuring Louie Alexander. A second workshop program by Dr. Marjorie McCordale will follow a lunch break in the Cancer and Leo Rooms.

A board meeting at 9:55 a.m. will precede the session.

Covered parking in the building is available for a nominal charge. Proceeds from the day's 80 admission charge will benefit the district's scholarship fund.

Reservations are to be made by Sept. 11 by calling Simon Bush in Houston at 866-0112 or Clara Clay in Pasadena at 477-0221, Ext. 285, daytimes or 472-8754 evenings.

Written reservations may be addressed to Simon Bush, 4912 Drosdy, Houston 77082; or Clara Clay, 1614 Martha Lane, Pasadena 77082.

On the agenda of a brief business meeting which will begin the day's activities in the Segitarius Room will be selection of a district nominee for the TPW Woman of Achievement.

Church To Build In Clear Lake

The sale of 3.8 acres of land in Clear Lake City to the Philadelphia Church was announced Aug. 29 by Friendswood Development Company.

The site is located at the corner of Bay Area Blvd. and Saturn Lane.

According to Pastor Robert R. Way of the Philadelphia Church the land will be used for the construction of a 40,000 square foot education and worship facility that will serve his Clear Lake area congregation.

Pastor Way noted that construction on the 10,000 square foot first-phase of the building project was expected to begin early in 1976.

Picnic Planned

St. James United Presbyterian Church will hold a church picnic Sept. 14 at Bay Area Park.

Iced tea, Koolaid, plates, cups and napkins will be provided and each family is asked to bring two dishes. Dinner is set for 12:30.

For further information contact Ann Hindbrook, 471-6000 or Harriette Orslop, 479-7704.

Private Art Show and Sale

Featuring

Paul Kime, Western Artist and Sculptor

P. K. Kime — Born and raised in South Texas, he now lives and works in western Texas. He has studied his subjects well and experienced and artistic talent. His subjects are horses, cattle, sheep, and other animals. He has a deep understanding of the life of these animals and is able to capture the spirit of the animal in his work.

Kime has been practicing his art in art of many forms from painting to sculpture. He has a deep understanding of the life of these animals and is able to capture the spirit of the animal in his work.

The artist is a dedicated Western artist being raised on and around horses and cattle. He has a deep understanding of the life of these animals and is able to capture the spirit of the animal in his work.

The artist now lives in San Antonio with his wife and two children. He is a dedicated Western artist being raised on and around horses and cattle. He has a deep understanding of the life of these animals and is able to capture the spirit of the animal in his work.

Dinosaur Taking Shape

Bone by bone the giant dipodocus, largest dinosaur to display in this part of the United States, is taking shape. After years of construction, mostly in shops out of the public view, the dinosaur is finally beginning to great visitors to the Houston Museum of Natural Science.

The dipodocus is 80 feet in length, one of the longest dinosaurs ever to roam the earth. This one occupies the main level of the Museum with its head rising toward the ceiling to keep a watchful eye on visitors to the second floor mezzanine.

The skeleton was excavated near the turn of the century on the Powder River in Wyoming. It was about 60 percent complete when first discovered. Bone by bone the huge skeleton is now being restored to its original form. Museum personnel have spent the last five years building the remaining 40 percent and repairing the original pieces which were crushed or broken during the 135 million years they lay buried. The remainder of the construction will be completed in full public view, as the exhibits team, led by Dr. Wm Langdon, Jr., the vertebrate paleontologist in charge of the project, places each bone in its proper position on the metal support to the display area.

For the past several years

Andromeda Planetarium Show

Andromeda is a myth, a constellation, a galaxy, and now a Planetarium program about the eternal search for life in the universe. The show begins in ancient Greece with the legend of Andromeda — a classic tale of a ferocious sea monster, a damsel in distress, and a noble hero told in giant figures spread through the autumn starfield.

The audience then travels to the windy plain of Salisbury in England to watch the construction of Stonehenge. Over 3,000 years ago, ancient astronomers used the giant stones and markers to predict eclipses, moon phases, and possibly eclipses.

In both ancient Greece and ancient Britain, the heavens became a clock and a calendar — a starfield alive with sun gods, moon goddesses and a host of lesser deities, all bringing the stars into a very personal relationship with man.

This ancient personal astronomy faded with the Copernican revolution and the subsequent work of Kepler, Galileo, Newton, Herschel, Einstein, and Hubble. Telescopes moved stars into suns trillions of miles away. The moon and planets became hostile alien worlds. The search for companionship among the stars soon revolved about a new and different question: Is man alone?

If stars are other suns, perhaps there are other solar systems with other life-bearing planets. Perhaps there is an alien creature on a distant world ready to share the stargazing night.

Mankind had now sent a radio signal to announce his presence to the distant star cluster, called M13. This is a tergalactic greeting, drawn in mathematical symbols and pictures, describing earth biology and our place in the solar system. If aliens in the M13 cluster detect this signal, we can expect their reply, traveling at the speed of light, to reach the earth around the year 50,000 A.D.

Although interstellar radio messages are few, perhaps there are more advanced civilizations that are far more talkative.

THE ASTROS COME HOME MONDAY!

AND THERE'S MUSIC IN THE AIR MONDAY, SEPT. 1-ASTROS vs BRAVES

IT'S BARBER SHOP CHORUS NIGHT WITH THE 85 VOICES OF THE HOUSTON TIDELANDERS CHORUS ENTERTAINING AT 6:45 BEFORE THE BIG GAME BEGINS!
